PROFILE SUMMARY

Detail-oriented **Senior Associate Engineer (Manual Testing)** with **1 year of professional experience** at Ascendion Engineering. Skilled in **manual web/mobile testing, test case design, defect reporting, API testing, and basic QA automation**. Strong knowledge of **STLC, SDLC, Functional, Regression, Smoke, and Sanity Testing**. Quick learner with good communication and collaboration skills, with hands-on experience in delivering quality software through structured testing processes and process automation (Ansible, Azure AD, AvA Platform).

PROFESSIONAL EXPERIENCE

Ascendion Engineering **2024 – Present**
Senior Associate Engineer – Manual Testing *India*

- Currently working on the **GCash** project as a **QA Tester**, responsible for creating detailed test cases for every new sprint item and executing backend/frontend regression, PVT, clean pass, and sanity test cycles without missing any deadlines.
- Worked on the **HP** project as a **QA Automation Tester (Selenium with Java)**, where the key responsibility was to create agents and workflows in the **AvA Platform** to automate test artefact generation and improve team productivity.
- Contributed to an **Internal Automation Project** by developing Ansible playbooks for Windows MS SQL Server DB health checks and Azure AD user management, as well as building agents for SQL monitoring and Maven JAR builds.
- Designed, executed, and reviewed **manual test cases** for mobile and web functionalities, ensuring coverage of functional, regression, smoke, and sanity testing.
- Logged, tracked, and managed defects using **JIRA**, collaborating with development teams to reproduce, prioritize, and verify fixes.

PROJECTS

Internal Project – Automation using Ansible, Azure AD & AvA Platform | QA & Automation Engineer **2024**

- Explored automation opportunities by writing **Ansible playbooks** for DB health checks on **Windows MS SQL Server**, Azure AD user creation/enable/disable, and integrating workflows within the **AvA Platform**.
- Developed automation scripts and agents to monitor **DB space utilization, health, deadlocks, and job activities** for Windows MS SQL Server, improving observability and proactive issue detection.
- Automated the **Azure AD onboarding process** by creating new user accounts with predefined roles, licenses, and access rights, reducing manual provisioning effort and ensuring users were onboarded quickly with correct entitlements.
- Implemented automation to **enable/disable Azure AD user accounts** based on request approvals or account activity, ensuring compliance with access control policies and minimizing risks from inactive or unauthorized accounts.
- Built agents for **SQL monitoring** and a **Maven JAR build agent** that generates JAR files from Java code, showcasing creativity in applying automation to real use cases.

HP Project – QA Automation (Selenium with Java) | QA Automation Tester **2024**

- Worked as a **QA Automation Tester** where the main objective was to create intelligent **agents and workflows** within the **AvA Platform** to support testing activities.
- Created multiple agents such as **Fetch_User_Stories_from_jira, Generate_Test_Scenarios, Generate_Test_Cases**, etc., to automate the transformation of Jira user stories into structured test assets.
- Improved productivity and consistency by reducing manual effort in test design and documentation, enabling faster test preparation for each sprint.

GCash – Mobile Wallet Application | QA Tester **2024 – Present**

- Analyzed sprint requirements and prepared **high-quality test scenarios and test cases** for new features and enhancements across wallet, payments, authentication, and security workflows.
- Performed **test execution** for various cycles including backend and frontend regression, PVT, clean pass, and sanity testing, ensuring all committed deliverables were achieved within the sprint timelines.
- Executed test cycles across multiple builds and environments, reporting defects with detailed reproduction steps and impact analysis in JIRA.

- Performed end-to-end user flow testing to ensure usability, app stability, and smooth transactional experience for customers.

Implementation of Residential Energy Management System Web Application using Machine Learning | Academic Project

- Developed a **Residential Energy Management System (REMS)** web application to reduce power consumption from the grid by intelligently switching loads between grid and renewable-energy-based local storage.
- Implemented automation of switchover using a **Support Vector Machine (SVM)**-based machine learning model to optimize energy usage.
- Worked in a team of 3, contributing to **requirements analysis, model development, and testing** of the web solution.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL
Testing: Manual Testing, Test Case Design, Defect Tracking, Regression Testing, Basic Test Automation
Cloud & DevOps: Microsoft Azure, Azure DevOps, GitHub, Maven, Docker, Ansible, CI/CD Pipeline Concepts
Scripting & Automation: PowerShell, Ansible Playbooks, AvA Platform Agents
Incident Management Tools: JIRA, ServiceNow
Operating Systems: Linux Administration, Windows Administration
Web Technologies: HTML, CSS, JavaScript
Soft Skills: Communication, Time Management, Teamwork

EDUCATION

Chaitanya Bharathi Institute of Technology <i>B.E in Electrical and Electronics Engineering (CGPA: 8.78/10)</i>	Nov 2020 – May 2024 <i>Hyderabad, India</i>
Sri Chaitanya Junior College <i>Intermediate in MPC (Percentage: 97%)</i>	Jun 2018 – Mar 2020 <i>Hyderabad, India</i>
Krishnaveni Talent School <i>SSC (CGPA: 9.7/10)</i>	Mar 2017 – Mar 2018 <i>India</i>
